

FEATURES:

- Designed for the efficient removal of limescale and sludge from heating systems and boilers by circulating water and flushing chemicals at high velocity, then purging the dirty water from the system with a high flow of fresh clean water
- The whole house power flusher will clean a system of up to 20 radiators without removal from the system
- Fitted with single fill up valve and double dump valves, allowing you to purge on both forward and reverse flow when operating
- With the introduction of condensing boilers in 2005 the Rocal power flusher becomes an essential part of a heating engineer's equipment
- The powerful 0.45hp pump will pump to a maximum head of 15 metres at a rate of 50 litres per minute
- The tank has a capacity of 24 litres and can be operated at a maximum temperature of 50 degrees celsius
- The 6.1197 Rocal power flusher can be used with any commercially available flushing chemicals except for strong acidic or alkali based products
